Miniature Blower with Integrated Electronics

Micronel AG has expanded the U51 blower series by a headline-catching new highlight, the "U51DL-Integrated".

The external diameter of this miniature blower (Ø 50 mm) is only 8 mm bigger than a golf ball but reaches a static pressure of more than 4800 Pa, and freeblowing more than 500 l/min. The product innovation is the housing with all-integrated electronics what required only marginal overall size modification. This novelty is extremely space-saving in its application and easy to use, i.e. no additive external control electronics is required.

The U51 blowers are already successfully in use in various applications for sleep apnoea, breathing, cooling vests, packaging machines, etc. Typical applications are high pressure demand and little place requirement.
